A4 Cognitive Behavior Research Poster

Survey (NFHS-5), the fifth in the NFHS series, provides information on population, health, and nutrition for India and each state and union territory...

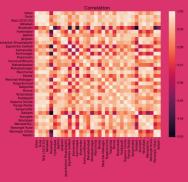

-> Hypertension among Adults (age 15 years and above): People suffering from blood pressure are taking medicines on a timely basis in all districts

-> Quality Of Family Planning : Health workers tell about about family planning to the female non users.

-> Child Vaccinations and Vitamin A **Supplementation:** Comparing both the years (2019-20) and (2015-16) there is a rise in the vaccination trend among children in all districts of Telangana.

<u>Hyper Tension</u> **Among Women** And Men(above 15 <u>years):</u> From the correlation plot, we can observe that in Urban and Rural have same correlation that is the hypertension in women have same percentages in the urban and rural

CONCLUSION:

From the above analysis we can conclude that: Hyper Tension: In all the districts of Telangana a whole of (20-30%) of people are interested in taking the medicines for BP. This indicates that the null hypothesis is wrong. Family Planning Services: Its clear from the analysis that health workers talked much about the female non-user family planning and current users saying about current side effects. It is relatively less in Urban than in Rural, so is with the districts. So, it is valid to reject the null hypothesis mentioned above.

Vaccination and A Vitamin Supplementation :On comparing the data of 2019-20 and 2015-16 we see their is a increasing trend which proves the null hypothesis is indeed TRUE

INTRODUCTION

Health and well-being is a high priority in current health and social care provision. The importance of promoting health and wellbeing is due to the dramatically increasing trend of morbidity and mortality from health problems, illness and chronic disease.

HYPOTHESIS

Being healthy is a choice. Specific guidelines are there to maintain good health, but in the end, it is individual effort and determination. Good health is essential for having a pro-active and fully functioning life. Man is a social animal, and good health ensures social survival. Health, besides being personal, is also social. A healthy person can bring positive changes in society. It is not an end to itself but also the key to creating a better and more reformed community.

METHODS

Design: NFHS-5, Survey Experiment

Participants:

Participants in our current list consisted people from all the districts of Telangana.

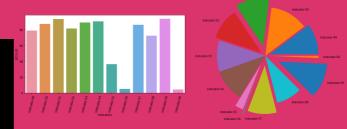

Treatment: Participants were asked about various aspects of health and wellbeing

Quality of Family planning Services The figure depicts the concentration of data of (a) Health worker ever

to female non-users about family planning (%) (b) Current users ever told about side effects of current method(%),which

N O

confirms no outliers

Vaccination and A Vitamin Supplementation: From the plot we can infern that, focusing in the duration of 2019-20 the vaccinations among all the districts of Telangana is approximately equal to 80% and leaving behind about 20% of the indicators (Indicator-55,56,60) have not yet completed up to the mark.

Therefore, the state government and local public health agents should assure that an effective community health improvement process is in place in all communities.
